

“Healthcare simulation brand”

Venipuncture arm model 1

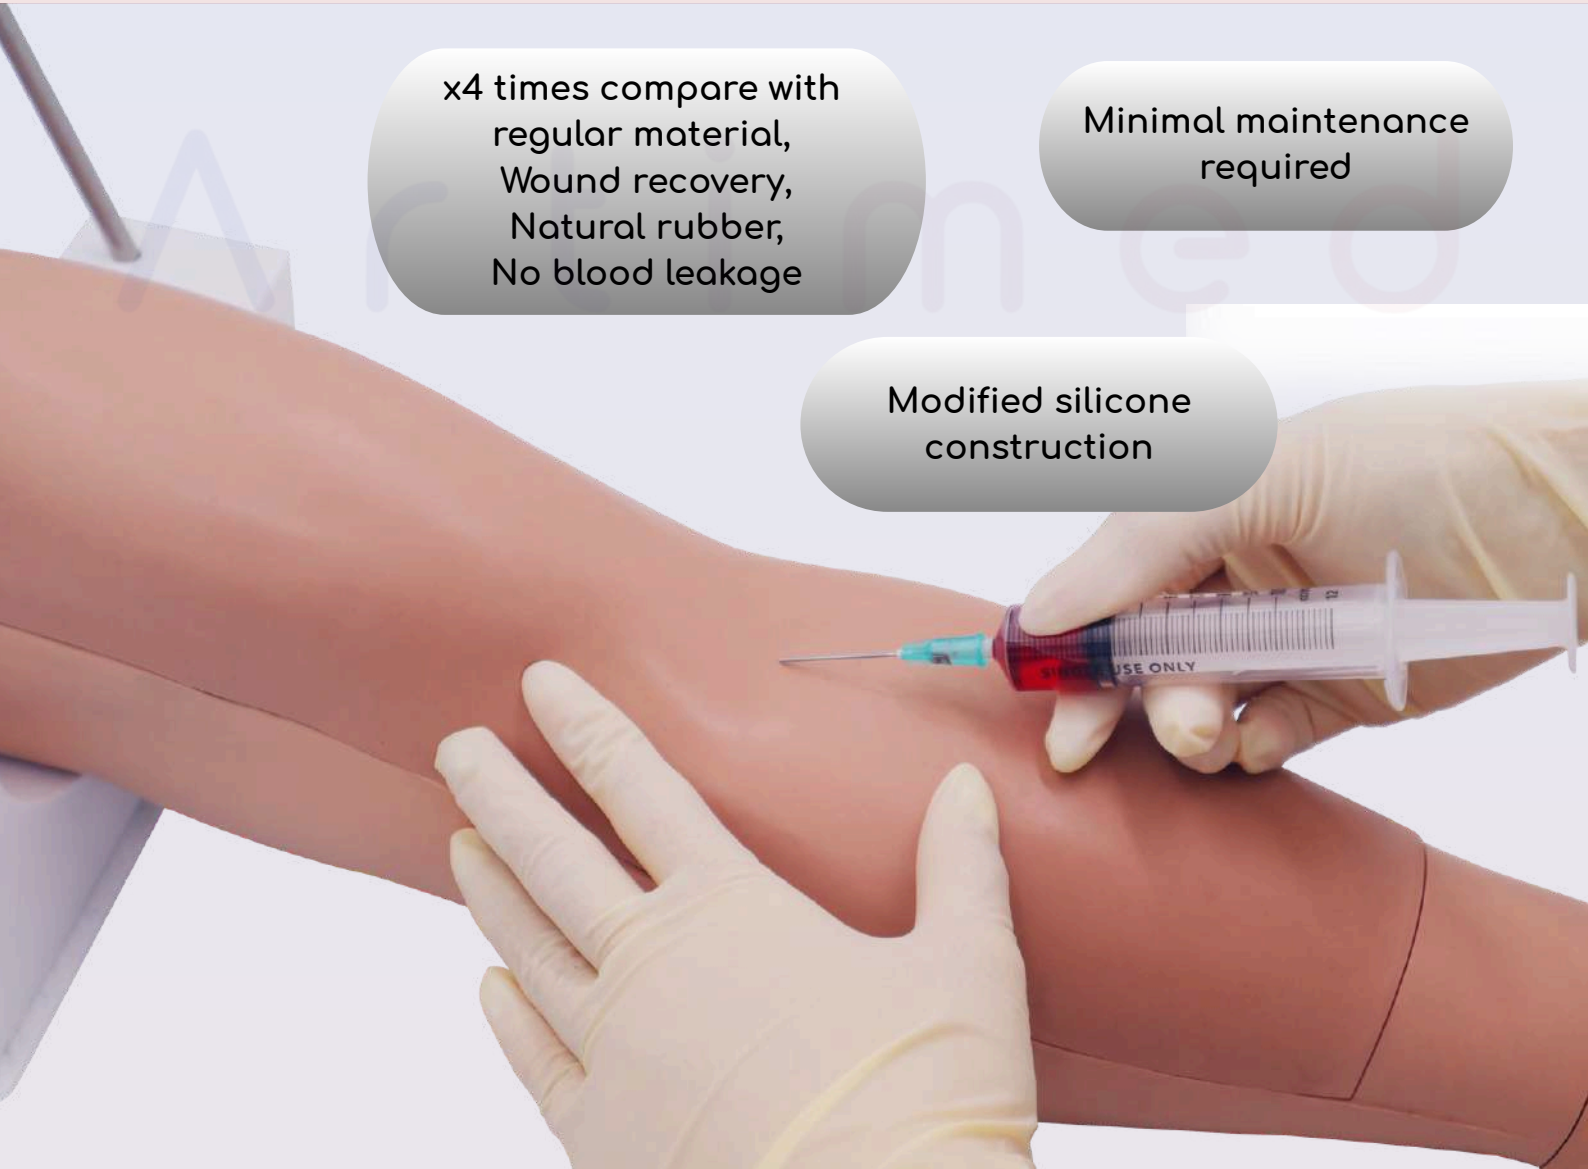

Professional medical training equipment designed for realistic phlebotomy practice. Experience anatomically accurate vein placement with advanced tactile feedback technology.

x4 times compare with
regular material,
Wound recovery,
Natural rubber,
No blood leakage

Minimal maintenance
required

Modified silicone
construction

Venipuncture arm model 1

Artimed

Products Description

General Features

- Realistic Skin Technology
- Durable Construction
- Realistic Palpable Veins
- Authentic Blood Flashback

Durability & Maintenance

- High Volume Use
- Anatomically Accurate Placement

Procedural Capabilities

- Intravenous (IV) Injections
- Peripheral Vein Cannulation
- Integrated Gravity Fed Blood System

Products Description

General Features

- Realistic Skin Technology : Provides realistic tactile feedback and resistance to human skin
- Constructed from specially modified silicone and latex for enhanced durability and resistance to repeated use
- High quality components support repeated incisions while maintaining consistent performance

Procedural Capabilities

- Designed for a range of incision and suturing techniques, suitable for both group instruction and individual practice
- Supports stapling and common incision types, with adhesive strip training for non-invasive or post suture wound closure.
- Allows training in undermining techniques essential for tension free and aesthetic closure
- Compatible with basic to advanced techniques, including interrupted, continuous, and subcuticular suturing

Durability & Maintenance

- Silicone and Latex modified
- Maintains surface texture and function through repeated training sessions
- Durable against repeated incisions and sutures, ensuring cost efficiency
